

A young child with blonde hair, wearing a white t-shirt with the text 'MAMA'S BOY' and dark shorts with a white pattern, is sitting on a dark wooden table. The child's hands are covered in bright blue slime. In front of the child is a black rectangular tray filled with the same blue slime. The background is a light blue wall with a white circular graphic element containing the text 'Sensory Slime recipe'.

Sensory Slime

recipe

What you need

- Shallow tray or bowl (A baking tray works well)
- Cornflour
- Water
- Food colouring (optional)

Directions

- Pour cornflour into the bowl/tray
- Mix in water a little at a time until you have a consistency you are happy with (for coloured slime add food colouring to water first)
- Add various cups, spoons or toys such as small cars or animals.

Alternately, provide children with a bowl of cornflour, large tray and cups of coloured water and let them experiment with the pouring and mixing.

For easy clean up, let the slime dry back to a powder form and simple sweep or vacuum up and discard in the bin.
